SECTION – 7 COMPREHENSION

Passage - 1

Galileo was born in Pisa, Italy on February 15th, 1564. His father, Vincenzo was a music teacher and musician. After his family moved to Florence, Galileo was sent to a monastery to be educated. He was never really interested in medicine and studied mathematics at the University of Pisa. He was especially interested in famous mathematicians like Euclid (geometry) and Archimedes. In fact in 1586, he wrote his first book about one of Archimedes theories.

He looked for a job that paid more, and became professor of mathematics at the University of Padua where he stayed for eighteen years. He became very interested in astronomy discovery of a new star in 1604. This turned out to be an exploding sun called a supernova.

In 1609 Italian called Galileo invented the first telescope.

He wrote a book called the “Starry Messenger”, and said that there were mountains on the moon, the Milky Way was made up of many stars and there were small bodies in orbit around Jupiter.

He saw the high mountains and deep valleys of the Moon and found that it was a solid world. He saw that some ‘stars’ were planets like the Moon, and seemed small only because of their immense distance. In the 17th century he found that the moon was like the earth.

The next 300 years saw a steady stream of spaceflight stories. Then in 1942 something happened that gave man the power to reach the Moon. At Peenemunde, a secret German research station on the Baltic coast, the first V-2 rocket was launched.
